# **INTRODUCING EVITA – MAJOR INCIDENT TRAINING PLATFORM**

# TAKING IMMERSIVE TRAINING TO THE NEXT LEVEL

EVITA is a highly immersive training simulator using the power of virtual reality to experience hyper realist environments filled with a variety of accredited training scenarios which allow multi-faceted role playing and learning outcomes to be achieved for the Emergency Services.

By putting on the virtual reality headset you are instantly transported to new surroundings which are as close to reality as possible. Patrol a busy platform on a train station, visit a disused building, explore an airport terminal or wander around a football stadium embraced by high definition images and realistic surround sound. A call comes in through your police radio to investigate a house where drugs are suspected to be hidden, co-ordinate the evacuation of a place near a growing fire or determine whether a suitcase left behind on a train is an explosive device. The trainees can be tested without leaving their office and others can join in with their training acted together despite being thousands of miles apart. The instructor can oversee all the training and make changes to the weather conditions or perhaps the time of day to see how this affects the training. Furthermore the environment is filled with intelligent characters who can interact with what's happening and make each visit to EVITA unique.

Chief Constable – Ian Hopkins**

**MULTIPLE USERS**

**EXPLORE AND SEARCH**

**LEARNING REVIEWS**

Praised by the College of Policing for its realism, CSI's can be tested on how they approach a fresh crime scene and its preservation. How photographic evidence is collated and how various evidence is seized. Radio messages. Can be sent to the headset which add extra dimensions to the task also. The progress of each of the students can be evaluated and reviewed after the training to show where improvements can be made.

Backed by the UK Government as an answer to the challenges of training for the new wave of terrorism threats. EVITA allows dangerous training environments to be undertaken safely, without the logistical nightmare and enormous cost associated with real life training where closing a train station or airport runway is necessary for the training to be realistic. EVITA transports you seamlessly into these new settings and puts trainees in situations which gets the heart beating from adrenaline whilst not even leaving your place of work. Praised for not only its realism but also its affordable price point and annual additional content subscription EVITA is seen to be the leading way to train the next generation of Police and Fire Officers of the future.

# USING AUGMENTED REALITY TO GET THE MOST BENEFIT FROM THE 'GOLDEN HOUR' OF AN INVESTIGATION

# FIRST RESPONDER

Evidential are proudly developing the next generation tool for Crime Scene Investigation which will help to provide enhanced scene preservation during the “Golden Hour” of an investigation. By utilising the latest augmented reality (AR) headsets, officers at the scene are instantly connected to Forensic professionals based at headquarters who can remotely assist in collecting evidence correctly and without delay.

Virtual co-location of decision makers will provide huge benefits where Senior Investigating Officers can instantly explore crime scenes from hundreds of miles away and demonstrate different forensic strategies quickly. Officers at the scene can be virtually guided to ensure key evidence is recorded before time specific evidence evaporates, digital devices become unusable or physical evidence gets damaged by others attending the scene. No longer do we need to cordon the scene and wait for the forensic specialists to arrive sometimes several hours after the incident has been reported and vital evidence has been lost.

By enhancing the chances of seizing key evidence we can ensure follow on investigations are shortened and the chances of obtaining perpetrators are increased. In partnership with the UK College of Policing and the National Crime Agency, we believe our First Responder application can be a vital forensic tool for the future of Policing which can not only deliver significant costs savings but also increase the rates of conviction.
